

Delta Separations foray into nutraceutical development

04 September 2019 | News

Delta Separations, LLC, a leading manufacturer of ethanol based cannabis and hemp extraction equipment in North America, is excited to announce a new partnership with Thai Freeze Dry Co. Ltd. (TFD) of Thailand, who's innovated a method of preserving the physical and molecular properties of plant materials.

Forms partnership with Thai Freeze Dry to expand into Asia

Delta Separations, LLC, a leading manufacturer of ethanol based cannabis and hemp extraction equipment in North America, is excited to announce a new partnership with Thai Freeze Dry Co. Ltd. (TFD) of Thailand, who's innovated a method of preserving the physical and molecular properties of plant materials.

The partnership will serve to provide Southeast Asia with Sales, Installation, Training and Customer Service for Delta's core product line of extractors (CUP-15 and CUP-30) and falling film evaporators (FFE-45 and FFE-60), followed by their complete product lineup in early 2020.

This new venture also marks Delta's launch into the global nutraceutical market, allowing the company to continue its goal of supporting the world with healthy medicinals. TFD and Delta are partnering to create a state of the art ultra-high efficiency freeze dry and extraction facility in Chiang Mai, Thailand. The facility will integrate TFD and Delta's technologies and be used as a blueprint that will be replicated around the world.

Roger Cockroft, CEO of Delta Separations, stated, "This represents a huge step forward in our global expansion. Southeast Asia is the obvious first step and now together with the Thai Freeze Dry team we can offer true Delta quality products and service. Our partnership combines two market leaders to be able to offer new innovative solutions to the nutraceutical industry at an industrial scale."
