

## Taiwan receives world's first banana 'New Dietary Ingredients' approval

02 November 2021 | News | By BioSpectrum Bureau

### Banana beats insomnia and anti-anxiety, approved by the US FDA

TCI Co., Ltd. has long been engaged in the research and development of banana peels and banana stamens, and finally passed the US Food & Drug Administration (FDA) NDI (New Dietary Ingredients) approval in the middle of this year, becoming the world's first banana NDI.

It is an important milestone for Taiwan's banana products to enter the world, and it has a better chance to seize tens of billions of dollars in health food in the United States.

The TCI in Taiwan announced that its "Banana Peel, Banana Stamen" has received the FDA's new dietary supplement ingredient NDI safety response, and approved for listing on the US market.

This is also the first case in the world that the new dietary banana anti-anxiety raw material and the new dietary banana male health raw material have been certified by the US FDA, which is expected to drive the domestic banana industry and enter the global tens of billions of dollars in health food market.

The number of people suffering from anxiety and depression in the world is increasing year by year. TCI's original patented "Banana Peel Ultrasonic Cold Extraction", the happy banana extracted from banana peel, has similar ingredients to the melancholic drug Prozac, which can significantly improve stress, anxiety and insomnia.
