ROASTELIER® by NESCAFÉ®'s innovation lies in its size as a compact coffee-roasting solution, designed for restaurants, cafes, and baristas

Nestlé® raises the bar in coffee roasting with ROASTELIER by NESCAFÉ® for out of home.

ROASTELIER by NESCAFÉ®'s innovation lies in its size as a compact coffee-roasting solution, designed for restaurants, cafes, and baristas, allowing business operators to unlock and simplify the art of roasting in the shop.

Driven by global trends that indicate roasting is now the number one expertise indicator and the ultimate premium enabler, ROASTELIER by NESCAFÉ® puts the freedom of creating one's signature blend in the hands of the coffeemaker. By simplifying the art of roasting and thus allowing customisation and experimenting through second-step roasting, it redefines the coffee experience with ultimate freshness.

ROASTELIER by NESCAFÉ® uses INTELLIROAST technology which combines the benefits of Fluid Bed Roasting with proprietary software, an intuitive system, and a robust exhaust management system designed to give you consistent roasting results, batch after batch.

The system is equipped with a QR code reader that recognises the coffee type and offers a range of roasting profiles defined by master roasters at Nestlé® and programmed into its database. Through an intuitive user interface, baristas can personalise the roasting of the coffee beans and access several sensory profiles from the selected bean types to create their signature blends.
