The partnership between LEVELUP and Dr David Willer is driven by a shared commitment to addressing the pressing environmental challenges of our time

Singapore-based, LEVELUP Climate Tech Pte. Ltd. has announced a partnership with Dr David Willer of the University of Cambridge (Cambridge). This partnership represents a notable achievement in the progression of the LEVELUP Impact; a SaaS platform which visualises the environmental impacts, including the calculation of greenhouse gas (GHG) emissions in the food sectors.

Dr David Willer, currently a Henslow Research Fellow at Murray Edwards College, University of Cambridge, possesses a substantial reservoir of expertise that significantly enriches this collaborative venture. His academic background, including a doctoral degree in Zoology and a first-class honours degree in Natural Sciences, underscores his academic prowess. His research portfolio encompasses a wide spectrum of areas, such as pioneering advancements in the largely untapped and promising fish and seafood sectors, aimed at bolstering both human health and environmental sustainability. His contributions extend beyond research, as he also provides invaluable thought leadership to inform policy decisions.

Of particular note is his pioneering work in the development of groundbreaking aquaculture production systems as well as his extensive proficiency in Life Cycle Assessment (LCA) methodologies applied to food products.

The partnership between LEVELUP and Dr David Willer is driven by a shared commitment to addressing the pressing environmental challenges of our time. By combining their collective expertise and resources, they aim to accelerate progress towards the mission of "SUSTAINABLE FOODS FOR NEXT GENERATIONS".
