The brand recognised with first 1,000 day promise certification, pesticide-free and purity awards

Kabrita, the leading global goat milk formula manufacturer, announced that the Clean Label Project (CLP), the national non-profit that recognises brands that place an emphasised focus on purity and surpass the minimum regulations required by the FDA, has awarded Kabrita Goat Milk-Based Infant Formula with its highest level of purity achievements including three certifications: First 1,000 Day Promise Certification, Pesticide Free and Purity Awards. This marks Kabrita as the first and only goat milk-based infant formula to achieve these honours, and it joins the ranks of Kabrita's Goat Milk Toddler Formula which also received the same awards.

Earlier this year, Kabrita introduced the first and only goat milk-based infant formula in the United States to meet all FDA requirements. This milestone came after completing years of clinical testing to prove that Kabrita's infant formula is safe and provides complete nutrition for a baby's growth in the first year. Goat milk proteins are more similar to breast milk proteins than cow milk proteins, making them easier to digest. It also contains 5x more naturally occurring oligosaccharides than cow's milk, the third largest component of breast milk.

"As a European-made company with 75 years of infant formula experience, Kabrita has always met and in many cases exceeded the strictest European standards for babies," said Elieke Kearns, PhD, RD, director of medical and scientific affairs, Kabrita USA. "The Clean Label Project certifications are an important third-party reassurance of the strict safety standards that go into our high-quality products. Our goal has always been to produce the safest goat milk-based infant formula on the market."
