Achieved 3 carbon neutral units within less than a year of announcing the action plan Vinamilk Pathways to Dairy Net Zero 2050

Achieved 3 carbon neutral units within less than a year of announcing the action plan Vinamilk Pathways to Dairy Net Zero 2050

Vinamilk, Vietnam's leading dairy company, announced that its Vietnam Beverage Factory has attained international certification for Carbon Neutrality (PAS 2060:2014) from the British Standards Institute (BSI). Achieved 3 Carbon Neutral Units within less than a year of announcing the action plan Vinamilk Pathways to Dairy Net Zero 2050, this demonstrates the company's commitment and remarkable progress in sustainable practices.

Established in 2010, Vinamilk's Vietnam Beverage Factory produces over 282 million items annually. The factory's certification confirms the neutralisation of 3,410 tons of CO₂e emissions, achieved through emission reductions in production and investments in forest funds to absorb greenhouse gases. Through the adoption of green energy and advanced technologies, the factory sources over 92 per cent of its energy consumption from clean, renewable sources, resulting in a 30 per cent reduction in emissions.

This notable milestone underscores Vinamilk's dedication to sustainability, as the company now has a total of three certified facilities (including Nghe An Dairy Factory and Nghe An Dairy Farm). Together, these facilities offset 21,000 tonnes of CO₂ emissions (scope 1 & 2), equivalent to the impact of approximately 2 million trees.
