The upgraded visible ice basket is now 25 per cent larger, with a capacity of 1.5L, and features a new transparent design for easy visibility

ecozy, a leading global home appliance brand, announces the launch of its latest product: the Most Compact Yet High-Capacity Countertop Nugget Ice Maker. The upgraded visible ice basket is now 25 per cent larger, with a capacity of 1.5L, and features a new transparent design for easy visibility. The clear window allows users to monitor ice levels effortlessly, ensuring a constant supply of ice without needing to open the machine. The enhanced capacity meets the increasing demand for ice during the hot summer months, making it an essential appliance for any home.

Building on the success of ecozy's best-selling "Most Compact Yet Powerful Nugget Ice Maker" on Amazon, which is 40 per cent smaller in size and has a 37 per cent larger ice production capacity than conventional models, the new Nugget Ice Maker Countertop continues to deliver exceptional performance in a streamlined, space-saving design. The ice basket has been significantly upgraded from the previous model, ensuring it meets the high demands of today's consumers. Market research indicates a growing trend towards compact, high-efficiency home appliances, with consumers increasingly valuing space-saving solutions that do not compromise performance.
