This strategic acquisition is set to fill technological gaps and strengthen B&W's position as an industry innovator

Swiss technology group B&W announced the acquisition of Esau & Hueber, a German company specialising in individual solutions in hygienic process and fermentation technology in the beverage, food, pharmaceutical, and biotechnology sectors. The acquisition enhances B&W's malting, brewery, and sustainable protein businesses, expanding the company's expertise and capacity in these areas while multiplying the reach of Esau & Hueber's technology across B&W's global network.

"This acquisition aligns perfectly with our long-term strategic objectives," said Johannes Wick, CEO of Grains & Food business at B&W. "By leveraging Esau & Hueber strengths in brewery and sustainable protein areas, we can provide superior solutions to our customers in these sectors." This strategic acquisition is set to fill technological gaps and strengthen B&W's position as an industry innovator.

Esau & Hueber is an independently managed manufacturer with 42 employees and supports its clients in all project phases. It designs and builds high-tech facilities and develops advanced processing technology. Esau & Hueber holds strong expertise in yeast and fermentation management, as well as automation. Esau & Hueber will continue to operate from its home in Schrobhausen.

B&W Group is a global leading technology company in the fields of food, feed, and mobility. Among its areas of expertise, it provides customers worldwide with cutting-edge solutions in malting and brewing. Its technology covers the entire process, from raw material processing to producing the finest malt and beer. Additionally, B&W's technology can monitor product quality with advanced sensors and automate the production process with digital services.
