The joint venture will set up a Centre of Excellence in Pune and will focus on producing and distributing machinery and complete plants for the Indian market

The joint venture will set up a Centre of Excellence in Pune and will focus on producing and distributing machinery and complete plants for the Indian market

Omnia Technologies, a leading platform for processing automation and bottling technologies for the spirits, wine, beverage, dairy and pharma industries, has announced a strategic Joint Venture with Economy Process Solutions, India's leading provider of vacuum systems and process equipment. Headquartered in Pune, the Joint Venture aims to be the leading provider of processing and packaging equipment for Indian companies operating across the beverage and pharma value chains.

Omnia Technologies, headquartered in Treviso (Italy), generates a consolidated turnover of over €700 million, with 37 production sites, 24 commercial offices and approximately 2,500 employees. The project was born in 2020 through the combination of well-known brands such as Della Toffola, Bertolaso, TMCI Padovan, Frilli, ACMI, Comas, Tecnomaco and several other strategic and complementary businesses.

Economy Process Solutions, headquartered in Mumbai with manufacturing facilities in Chakan, Pune, has been a key partner of Omnia Technologies for almost three decades. The company has worked in promoting the Della Toffola brand since 1996, starting with brewery filtration units and later expanding in the winery and filtration markets, establishing Della Toffola as the market leader in the industry.

This Joint Venture aims to achieve long-term growth, driven by Omnia Technologies' technological leadership and Economy Process Solutions' engineering expertise and deep knowledge of the Indian market. As a part of this Joint Venture, a Centre of Excellence will be established in Pune. The plant will allow the Joint Venture to better serve Indian customers, while local engineering and manufacturing capabilities will allow it to offer solutions across the beverage, pharmaceutical, and dairy sectors dedicated to the Indian market.
