Partnership with a North American-based global leader in high-tech manufacturing, operating 40+ factories and over 26,000 employees worldwide

Partnership with a North American-based global leader in high-tech manufacturing, operating 40+ factories and over 26,000 employees worldwide

The Circus Group, a leading technology company in AI and autonomous robotics for the food service sector, announces a partnership with a global leader in contract manufacturing for high-technology hardware solutions. Circus specialises in autonomous solutions for the \$2.6 trillion food-service industry, aiming to disrupt the market through AI-Software and robotics. The contract intends to fulfil the high order volume for CA-1 robots currently being negotiated as already published.

The North American-based partner is a global leader in high-tech contract manufacturing in the Industrial, HealthTech, Automotive, and Aerospace sectors. With a strong expertise spanning design, manufacturing, and supply chain solutions, the partner serves Fortune 500 and industry-leading companies globally. Operating 40+ factories worldwide with a team of more than 26,000 employees, the new production partner brings innovative technologies from concept to large-scale production with talented teams and locations across North America, Europe and Asia.

Circus CA-1 is a fully autonomous robot transforming the food service industry, handling all tasks from ingredient dispensing to cooking, cleaning, and packaging without human intervention. Powered by CircusAI, an end-to-end AI software for intelligent autonomous operations, CA-1 addresses industry-wide labour shortages and inefficiencies. As the first AI robotics player in this sector, Circus combines advanced robotics with its proprietary CircusAI software to cut production costs, reduce food waste, and uphold high standards of quality and hygiene. This innovation enables a scalable, centrally managed network of autonomous kitchens with a fraction of the cost and space compared to labor-driven kitchens.
