The Elderberry Yeast β -glucan drink adheres to Witsbb's pioneering "allergy-free" formula and is enhanced with a new generation of high-standard immune formulas

Australia-based, Witsbb, a pioneer in "allergy-free" nutrition, has launched its latest product – the Elderberry Yeast β -glucan drink. As an immune-boosting nutritional product specifically developed for children aged 6 months to 12 years, the Elderberry Yeast β -glucan drink adheres to Witsbb's pioneering "allergy-free" formula and is enhanced with a new generation of high-standard immune formulas. Upon its release, the product garnered widespread acclaim from the market and has received continuous positive feedback from a broad base of consumers.

Compared to other immune-boosting products, the newly launched Elderberry Yeast β -glucan drink by Witsbb stands out through its carefully selected ingredients, meticulously researched formula, and innovative technology. It combines seven layers of immune-boosting nutrients, opening a new chapter in infant and children's immune nutrition.

Witsbb's Elderberry Yeast β -glucan drink adheres to an "allergy-free" formula, excluding dozens of common food allergens, and is produced to the highest industry standards. The product's ingredients, whether it's elderberry, yeast β -glucan, or young pear extract, have significant advantages over many other sources. Not only are they backed by top-tier patents, but they also feature a multi-layered immune formula. The product is designed to enhance self-protection, recovery, and resistance, with noticeable effects. As a result, it has received enthusiastic responses from consumers upon its release.
