The new primary processing plant is expected to commence production in early 2025

Saudi Arabiaâ??s Tanmiah Food Company announced that its subsidiary, Agricultural Development Company (ADC) has entered into a contract to acquire a new state-of-the-art primary processing facility, a significant milestone in its strategic expansion efforts, for a total value of SAR 143 million.

The new primary processing plant is expected to commence production in early 2025, with an initial annual capacity of approximately 37 million birds. Further upgrades are planned to increase the capacity to approximately 56 million birds per year. The plant will produce the complete range of Tanmiah Fresh Chicken products, boosting the Companyâ??s portfolio of high-quality and innovative food solutions to Food Services and Retail channels. The new plant will also contribute to KSAâ??s economic growth by creating new job opportunities, supporting local talent, and aligning with the Kingdomâ??s vision for a thriving and dynamic workforce.

Equipped with advanced waste management systems, the plant also reinforces Tanmiahâ??s commitment to sustainability by minimising environmental impact and supporting responsible production practices. This investment aligns seamlessly with its vision of driving growth while upholding the highest standards of environmental stewardship and operational excellence. The plant's proximity to Tanmiahâ??s existing facilities and farms will enhance efficiency and productivity.
