This advanced solution streamlines scale operations for food retailers, enabling seamless data synchronization, accurate labelling and enhanced regulatory compliance

Logile, a global leader in AI-powered Connected Workforce platform and retail solutions, has launched its transformative cloud-based Scale Management Solution, a groundbreaking addition to its Fresh Inventory Management portfolio. This advanced solution streamlines scale operations for food retailers, enabling seamless data synchronization, accurate labelling and enhanced regulatory compliance.

Following a successful pilot at Vallarta Supermarkets, the solution is now rolling out across all their locations, with additional implementations planned for 2025 at other retailers. Developed with input from food retail, convenience stores and industry experts, the Scale Management Solution addresses critical challenges by automating pricing updates, ensuring accurate nutritional and allergen labelling, and providing centralised oversight across multiple locations. It can update over 1,800 items per scale in minutes, significantly improving operational efficiency while reducing errors.

Integrated with Logile's Fresh Inventory Management suite, the solution offers more than traditional scale functionality. It connects with production planning, recipe and nutrition tools, enabling store teams to access up-to-date information effortlessly. Intuitive features, such as cookbook tools and guided instructions, ensure smooth execution and consistency across stores.
