BÃ¼hler and Ever After Foods will work together to bring a commercial-scale cultivated meat production system

BÃ¼hler and Ever After Foods will work together to bring a commercial-scale cultivated meat production system

Israel's Foodtech innovator Ever After Foods (EAF) and global food leader BÃ¼hler announced an expansive cultivated meat collaboration to help food producers around the globe produce cultivated meat efficiently at a mass scale. BÃ¼hler and Ever After Foods will work together to bring a commercial-scale cultivated meat production system, which allows commercial production at a ten-fold lower scale than existing technologies, to market.

BÃ¼hler aims to foster the development of equipment to enable market-ready, sustainable, healthy, and affordable cellular products that can address increasingly complex food system challenges, reduce environmental impact and improve food security. Ever After Foods provides the technology to deliver commercial-scale production systems specifically designed to meet the needs of the cultivated meat sector.

âThe global food chain faces significant challenges if we are to successfully and sustainably feed our growing population. How we produce and consume protein will continue to change, and requires a transition of our protein system to deliver this. Powering cultivated meat production at scale with a patented production system, Ever After Foods will help the food industry keep pace with the protein demands of a growing global population,â noted Ian Roberts, CTO at BÃ¼hler.
