

M2 Ingredients launches Myco SuspendÂ beverage solution

25 March 2025 | News

A proprietary beverage solution poised to redefine how consumers experience whole mushroom powders

A proprietary beverage solution poised to redefine how consumers experience whole mushroom powders

M2 Ingredients, the leader in functional mushroom innovation and the largest grower in the Western Hemisphere announced a groundbreaking partnership with the Regenerative Organic Alliance (ROA) to launch the first large-scale offering of Regenerative Organic Certified (ROC) mushrooms. This monumental launch features five highly sought-after species: Lion's Mane, Reishi, Cordyceps, Turkey Tail, and Chaga. Simultaneously, M2 Ingredients unveils â??Myco-Suspendâ?, a proprietary beverage solution poised to redefine how consumers experience whole mushroom powders.

M2 Ingredients is spearheading the regenerative organic agriculture movement, delivering ROC mushrooms that surpass conventional standards for soil health, animal welfare, and fair labour practices. Building upon the foundation of USDA Certified Organic, Regenerative Organic Certified introduces rigorous criteria that seamlessly integrate the three core pillars of regenerative organic agriculture: stringent requirements for soil health, animal welfare, and social fairness.

â??I am incredibly proud of the collaborative work weâ??ve accomplished with the ROA team to establish these new, stringent growing standards for ROC-certified functional mushrooms. This partnership empowers consumers to access premium, sustainably cultivated mushroom products that bolster both their well-being and the planetâ??s health,â? states Dr Sandra Carter, Founder of M2 Ingredients.
