Company strengthens its manufacturing capabilities and looks to reduce production costs and improve margins

The Alkaline Water Company, a leader in the beverage industry known for its purified alkaline water, enhanced with Himalayan rock salt, announced the finalisation of its previously announced equipment acquisition with FZA Note Buyers LLC, a Florida limited liability company, through its wholly owned acquisition entity Alkaline Water AZ LLC. The acquisition has been completed through the issuance of 34,000,000 shares of Restricted Stock subject to Rule 144 and a 12-month lock-up period imposed by The Alkaline Water Company, Inc. (OTC: WTER).

The completion of this transaction follows the Letter of Intent announced on February 13, 2025 and marks a milestone in The Alkaline Water Company, Inc. (OTC: WTER) strategy to enhance control over its manufacturing process, improve margins, and increase supply chain reliability. With the equipment fully integrated into its production infrastructure, The Alkaline Water Company expects to realise significant cost savings and operational efficiencies beginning in the current fiscal year.

"This is a major step in our operational transformation and vertical integration strategy, with the successful completion of our strategic equipment acquisition with FZA Note Buyers LLC," said Ricky Wright, CEO of The Alkaline Water Company, Inc. (OTC: WTER) "For the first time in our company's history, we now have control over our production lines, which is particularly valuable as we approach the high-volume summer season when securing production line time is always challenging. This acquisition strengthens our manufacturing capabilities while preserving our cash position, as the transaction was structured through restricted shares with a 12-month lock-up period, ensuring no impact on our current trading float."
