The newly launched XCoffee smart robotic beverage machine combines artificial intelligence, data analytics, and precision engineering to deliver freshly brewed coffee and oriental tea around the clock

XCoffee, a Singapore-based beverage technology company, unveiled the latest evolution of its AI-powered smart robotic beverage, reinforcing its commitment to innovation and quality in automated coffee and tea preparation across the region. Revolutionising the Coffee and Tea Experience.

The newly launched XCoffee smart robotic beverage machine combines artificial intelligence, data analytics, and precision engineering to deliver freshly brewed coffee and oriental tea around the clock. Each machine is designed to replicate the

quality and consistency of a barista-made beverage while maintaining high operational efficiency.

Using freshly roasted coffee beans and premium tea leaves, the machine grinds and brews each cup on demand. The process ensures that every beverage retains its natural aroma and flavour without the use of artificial flavouring or preservatives.

Developed and engineered locally, XCoffee represents a homegrown effort to integrate technology with Singapore's deep-rooted coffee culture. From bean roasting to flavour profiling and robotic development, all aspects of the brand's innovation are conducted in-house.

According to Deric Yeo, Chief Operating Officer of XCoffee, the company's goal is to redefine convenience through technology while maintaining a focus on quality.

"XCoffee's vision is to create a Singapore-born brand that reflects both precision and familiarity. Every cup embodies the balance between advanced automation and the taste preferences of the local market," said Yeo.
