Pioneering Quantum Ayurveda platform — clinically validated to deliver results at a fraction of conventional doses — now available in the U.S., led by nutraceutical veteran Gregory Arabatzis

Pioneering Quantum Ayurveda platform — clinically validated to deliver results at a fraction of conventional doses — now available in the U.S., led by nutraceutical veteran Gregory Arabatzis

What if the turmeric in your morning latte could actually work not just symbolically, but measurably, at the cellular level? That's the promise Greenspace Herbs is bringing to American consumers, as it formally launches its groundbreaking Quantum Ayurveda platform in the United States — backed by published clinical research, a new operational base in New Jersey, and a seasoned U.S. leadership team ready to take it mainstream.

For millions of Americans navigating a supplement aisle crowded with unverified claims, Greenspace Herbs arrives with something refreshingly rare: proof.

Quantum Ayurveda is not a marketing buzzword — it's a clinically validated platform that combines the power of time-tested Ayurvedic botanicals with frequency-based technological enhancement. The result? Ingredients your body can actually use — more efficiently, at lower doses, with faster, measurable results.

Think of it this way: traditional supplements often require high doses because the body absorbs only a fraction of what's ingested. Greenspace's technology changes that equation. Clinical studies — published in peer-reviewed scientific journals — show that their enhanced botanicals, including curcumin, ashwagandha, bacopa, and berberine, deliver measurable effects at nearly one-third of conventional dosing levels — with accelerated response timelines that consumers can actually feel.

"Today's wellness consumer is educated, demanding, and done with empty promises. They want to know: what does the science say, and will I feel the difference? Quantum Ayurveda was built specifically to answer both questions. We have done the clinical work. We have published the results. Now we are here in the U.S. to ensure that every consumer who chooses our platform experiences wellness that is real, measurable, and rooted in thousands of years of botanical knowledge — elevated by 21st-century science," Said Shafiulla Hirehal Nuruddin, Founder & Managing Director, Greenspace Herbs

Already successfully launched across India and key Asian markets, Quantum Ayurveda has earned strong early adoption among branded ingredient partners and finished-product collaborators. Now, Greenspace is bringing that momentum to the U.S. — the world's largest dietary supplement market, valued at over \$50 billion.

To lead the U.S. chapter, Greenspace has appointed Gregory Arabatzis as Chief Business Officer, USA — a 20-year veteran of the nutraceutical industry known for scaling science-backed wellness brands into multimillion-dollar commercial enterprises. With a new warehouse and operational office in New Jersey, Greenspace is not dabbling in the U.S. market — it's planting deep roots.

"The U.S. market rewards clinically substantiated innovation. Quantum Ayurveda stands out because it is not theoretical — it is supported by published scientific data. Our focus now is structured commercialisation, education, and partnership development," said Gregory Arabatzis, Chief Business Officer — USA, Greenspace Herbs
