

Algatech to launch Whole Algae Benefits in a Tablet

07 March 2018 | News

Algatechnologies Ltd. (Algatech) will launch its innovative, AstaPure® Arava whole-algae tablets for private label customers.

Algatech also will highlight its new, organic, non-GMO AstaPure® astaxanthin at the Vitafood 2018

Algatechnologies Ltd. (Algatech) will launch its innovative, AstaPure® Arava whole-algae tablets for private label customers.

This is astaxanthin as created by nature, containing all the naturally occurring constituents such as omegas, fibers, proteins and phospholipids that contribute to bioavailability.

Algatech cultivates microalgae in a patented, eco-friendly, closed system that guarantees the production of safe, pure ingredients and minimizes the environmental footprint.

Manufactured using ESL™ Technology, Algatech's proprietary method gently preserves the algae composition and allows for excellent stability of the natural astaxanthin in tablet format.

AstaPure Arava whole-algae is a superfood and aligns with the market demand for clean label, sustainable, minimally processed ingredients.
