

Greenspace Herbs Unveils Quantum Ayurveda Platform, Signals New Processing Era for Ayurvedic Nutraceuticals

18 May 2026 | News

The development comes at a time when the global nutraceutical sector is increasingly focused on bioavailability, clean processing, and natural efficacy claims

The development comes at a time when the global nutraceutical sector is increasingly focused on bioavailability, clean processing, and natural efficacy claims

Greenspace Herbs is positioning Quantum Ayurveda as a next-generation processing platform aimed at redefining how traditional Ayurvedic botanicals are activated, processed, and delivered for modern nutraceutical applications. Rather than introducing new ingredients, the company says the platform focuses on enhancing the performance of well-established Ayurvedic herbs through what it describes as frequency-led clean processing.

The company reported strong market interest during Vitafoods Europe 2026 in Barcelona, where the Quantum Ayurveda platform generated more than 280 formal global leads, highlighting rising international demand for clean-label, science-backed botanical solutions. According to the company, the response has shifted the conversation from validation to scalability, as it prepares to expand production capabilities for the platform.

Quantum Ayurveda is built around the use of controlled frequencies and quantum chemistry principles to influence botanical ingredients at a molecular level without relying on solvents, synthetic enhancers, or heavy chemical intervention. The platform aims to improve the speed, efficiency, and functionality of classical Ayurvedic ingredients while maintaining their natural composition and identity.

The development comes at a time when the global nutraceutical sector is increasingly focused on bioavailability, clean processing, and natural efficacy claims. Traditional Ayurvedic ingredients such as curcumin, ashwagandha, amla, tulsi, and bacopa have already seen multiple waves of innovation centred on extraction technologies and formulation enhancements. Greenspace Herbs believes Quantum Ayurveda introduces a different approach by focusing on processing architecture rather than ingredient replacement.

Quantum Ayurveda is not a product innovation it is a processing revolution, said Shafiulla Hirehal Nuruddin, Founder Director of Greenspace Herbs. For centuries, India has given the world its most powerful botanicals. What we are now adding is the science of how those botanicals can be made to perform at their fullest potential, without compromising

their natural integrity.â?•

He added that the market response at Vitafoods Barcelona demonstrated growing global readiness for â??clean-processed, frequency-activated Ayurvedic ingredients,â?• while also reinforcing the companyâ??s ambition to position India not only as the birthplace of Ayurveda, but also as a future hub for advanced botanical processing technologies.
