

GUTSI Expands Fulvic and Humic Mineral Platform into Beverages and Gummies

31 July 2026 | News

A scalable platform designed for multiple consumers, occasions and commercial channels

Victory Marine Holdings Corp., through its wholly owned operating subsidiary Dunn & Groux Beverage Holdings, Inc. (DGBH), announced the continued expansion of its GUTSI mineral-first beverage and wellness platform, unifying Fulvic & Humic Mineral Drops, Prebiotic Mineral Soda, Functional Mineral Hydration and the Company's developing functional Gummy products around a common fulvic and humic mineral foundation.

Management believes this common mineral platform provides GUTSI with a clear and scalable consumer proposition: delivering mineral-focused functionality through familiar formats designed to fit different routines, preferences, dayparts and retail channels.

GUTSI Fulvic & Humic Mineral Drops provide the portfolio's most concentrated and versatile format and are currently available through Amazon and the Company's relaunched direct-to-consumer platform, GetGUTSI.co. The Drops may be mixed into water and other beverages, providing consumers with a simple way to incorporate the Company's mineral formulation into everyday routines.

The same mineral-first philosophy extends across GUTSI Prebiotic Mineral Soda and Functional Mineral Hydration. DGBH is advancing preparations for its second commercial production run of Functional Mineral Hydration in 500mL and 1-liter PET formats, while continuing commercial production and distribution of its Prebiotic Mineral Soda. Together, these activities support inventory expansion, customer demand and broader distribution opportunities.

The Company is also advancing commercialization preparations for the GUTSI functional Gummy platform, creating a convenient chewable format intended to extend the brand beyond traditional beverage occasions. The developing Gummy portfolio is expected to include prebiotic, probiotic and postbiotic functionality, subject to final production, regulatory and commercialization requirements.
