

PATH, Quansys to reduce price for nutrition assessment tool

22 August 2018 | News

PATH and Quansys Biosciences, Inc., have agreed to reduce the cost of the Q-Plex[™] Human Micronutrient Array (7-Plex), an innovative nutrition tool launched in January 2017 to improve women's and children's health around the world.

With the assistance of PATH, Quansys has lowered the price of the micronutrient array to \$1.43 per analyte.

PATH and Quansys Biosciences, Inc., have agreed to reduce the cost of the Q-Plex[™] Human Micronutrient Array (7-Plex), an innovative nutrition tool launched in January 2017 to improve women's and children's health around the world.

With the assistance of PATH, Quansys has lowered the price of the micronutrient array to \$1.43 per analyte, making it even more affordable and accessible to the countries that need it most. This new price was the result of a yearlong collaboration between the two organizations. PATH and Quansys explored commercialization options to support an improved pricing structure better aligned with the needs of nutritional programs, while also being sustainable for Quansys.

The micronutrient array is now available at a significantly lower price than current commercial enzyme-linked immunosorbent assay (ELISA)-based methodologies, while offering several advantages over ELISA methods which include multiplexing capability, ease of use, faster run times, and automated read-outs. The new price, which equates to \$400 per test kit, is available to low- and middle-income countries, and organizations involved in public health research that benefits low- and middle-income countries.
